

QicsTable for Qt

The High-Performance Table for Qt 4

Whether it's called a table, a matrix, or a grid, QicsTable™ provides the full solution for developers who will not compromise on their applications. Features such as printing and sorting make it more user-friendly and highly customizable, while the extensive API provides direct access to all the advanced functions needed to quickly deliver powerful applications. With QicsTable, you spend less time subclassing your way to a first-class user interface.

Key Features

- Adaptable grid layout including major and minor columns
- Fully customizable row and column headers
- Automatic updating of multiple tables
- Multilevel control of fonts, colors, grids, and others
- Cells that can hold interface widgets
- Cells that can span columns and rows
- Selectable cell overflow options
- Property tree
- Multiple rows and headers
- Adjustable cell editing policies
- Full control over navigation and cell selection
- Efficient support of extremely large data sets
- Built-in high-performance sorting routines
- Extensible to accommodate unique data feeds
- Flexible printing support
- Import and export to popular desktop spreadsheets

Headers are customizable and even accept widgets

Cells can hold widgets and span columns
